Reasons for Allowance

Claims 4, 16-21, 25, 29, 32, 36, and 39. The independent claims claim where the predicted block decompression unit predicts that a block existing in a first direction from the first area is a next block to be rendered, the first direction being perpendicular to a second direction in which the scrolling has been performed to the first area. Cohen predicts the next block to be rendered will be in the same a direction in which scrolling has been performed previously see column 6 lines 15-125. However the prior art of record does not disclose "where the predicted block decompression unit predicts that a block existing in a first direction from the first area is a next block to be rendered, the first direction being *perpendicular* to a second direction in which the scrolling has been performed to the first area."
